

Michael J. Glass, Ph.D.
Government

Dr. Glass, who previously worked in both the industrial and nonprofit sectors as a Principal Scientist at Gull Laboratories, where he developed DNA-based diagnostic assays, and the Battelle Memorial Institute, currently serves as Chief of the Special Programs Division for the West Desert Test Center, U.S. Army Dugway Proving Grounds. He has been identified as a subject matter expert in biological warfare defense, counter-terrorism and counter-proliferation for numerous agencies within the Departments of Defense and Homeland Security. In this capacity, he has overseen the creation of testing and training programs to prepare both military and civilian first responders to deal with chemical and biological warfare measures, either in the United States or abroad. Today Utah Emergency First Responders are being trained in his Advanced Chemical and Biological Integrated Response Course, which is expected to be expanded at the national level.
